

CFM Facades & Rainscreens

Today's designers expect choice and flexibility; looking for aesthetic solutions combined with practicality.

CFM Facades & Rainscreens

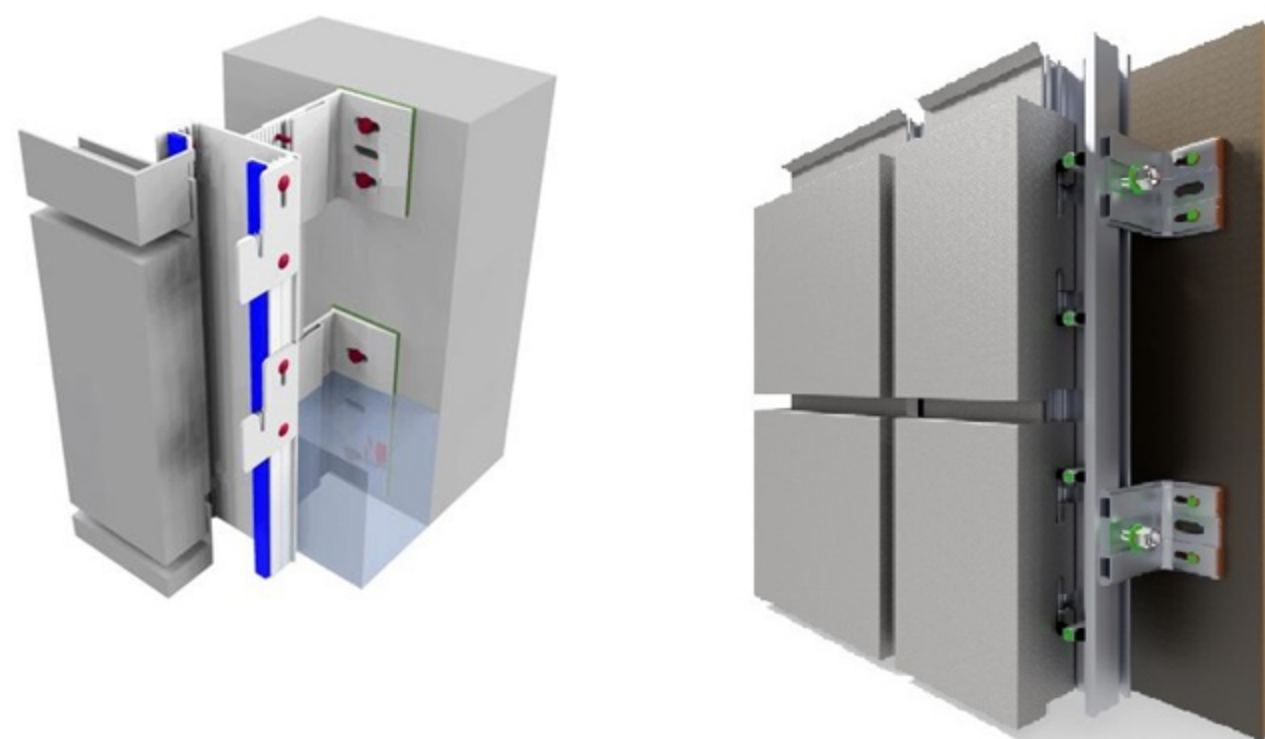

Today's designers expect choice and flexibility; looking for aesthetic solutions combined with practicality. The Central design concept provides exactly that, with the Central Fabrications product range being the solution of choice for many architectural situations.

These developments have given architects designers and contractors greater scope in material choice and increased confidence to specify Central Fabrications Rainscreen products in an ever-increasing range of building envelope situations.

We are currently developing a range of standard systems which are currently being tested to CWCT standards.

We offer a bespoke range of Façade and Rainscreen panels, Carrier Systems and bracketry, in a wide variety of materials and finishes. These include:

- Solid aluminium
- Perforated aluminium
- Composite aluminium
- Pre-coated steel
- Powder coated
- Anodising
- Helping hand brackets

The principles of Rainscreen facades can be used both for interior as well as exterior architectural designs for new and refurbished buildings. Applications as follows:

- Ventilated facades
- Curtain walling
- Fascia's and roof detailing
- Soffit detailing
- Column casing
- Balcony cladding and infill's
- Tunnel linings
- Partitioning and other interior uses
